## BPCOAT AS Series

Anti-Slip

# Non-Slip Surfaces & Safe Flooring Solutions

*Designed for safe steps!*

Anti-slip powder coatings are specially formulated coating systems designed to provide maximum safety in areas where the risk of slipping is high.

*The BPCOAT Anti-Slip Series* offers durable, functional, and long-lasting non-slip surface solutions for industrial and commercial environments.

## Application & Curing (General)

Suitable for electrostatic powder coating application.  
Applicable with both corona and tribo systems.

**180°C**  
10-15 minutes

*(Depending on the system)*

# What Is Anti-Slip Powder Coating?

Anti-slip powder coatings are thermoset coating systems containing special additives with controlled particle structure and surface texture. The controlled textured surface formed after curing increases slip resistance and ensures surface safety.

BPCOAT AS

## Why Should You Choose It? *Because,*

- High slip resistance (anti-slip surface)
- Safe use on both wet and dry surfaces
- High mechanical strength and abrasion resistance
- Long-lasting and durable surface

## Product Details

*The BPCOAT Anti-Slip Series* is developed for applications where occupational safety and floor performance are critical.

- Controlled textured surface structure
- Abrasion-resistant coating film
- Strong adhesion performance
- Long-lasting anti-slip effect

***Maximum performance is achieved with proper surface preparation and correct application conditions.***

## Application Areas

- Stair treads
- Ramps and walkways
- Industrial floors
- Platforms and scaffolding
- Fire stairs and emergency exit areas

***\*\*Anti-slip surfaces can be produced at different slip-resistance levels depending on the application technique and particle size. Light, medium, or high-textured systems can be recommended according to specific requirements.***
